Subject: RE: Atlas Resin stack test

Michelle,

Though my name is assigned to the facility in our WARP database, the frac. sand sites are actually handled by John Stoffel out of Baldwin, WI.

There is another effort going on within the Air Program whereby staff will be dedicated to witness stack testing at more facilities, including frac. sand sites, however, that effort is not yet up and running. Currently, I will not be attending this stack testing, however, if things change, I will let you know.

Thanks.

Hi Don,

Andy Seeber mentioned that you are now the facility contact for the Atlas Resin Proppant facilities in Merrilan and Taylor, WI. EPA requested Method 320 stack testing as a result of our inspection of the Merrilan facility and I just wanted to let you know that the testing is scheduled for the week of November 3. I plan on attending at least one of the days, but need some time to figure out my travel plans and can try to coordinate with you if you plan on attending as well.

Sincerely,
Michelle Heger
